Leonard Goh

Product Design at watchTowr
Singapore

Summary

Design practitioner in the digital space. Startups. Hands-on. Hustle.
Theory meets practice.

Experience

watchTowr

Head of Design

May 2022 - Present (4 years 3 months)

Singapore

I lead a small product design team working closely with the founder and leads across multiple teams.

The role demands a very high bar for craft. Design quality, fidelity, and attention to detail are critical, and a large part of my responsibility is translating demanding expectations into clear direction and consistently high-quality execution. This requires understanding the intent behind requirements and supporting the broader product vision through strong design and QA standards.

Beyond design leadership, I take on wider product responsibilities when needed. This includes shaping requirements, managing delivery, reviewing work across disciplines, and ensuring features move smoothly from idea through to release. At times, this means stepping into a product management role to keep the development cycle on track.

SWAT Mobility

3 years 10 months

Product Design Lead

January 2020 - July 2022 (2 years 7 months)

I led product design in a team of four while staying hands-on. A significant part of my role involved people management, alongside owning design quality across a growing suite of B2B applications.

I was responsible for design direction, consistency, and decision-making across products. This included setting standards, reviewing work, and supporting designers through regular critique and guidance.

I worked closely with Product Managers and Engineers to shape problems, prioritise work, and ship clear, usable solutions. Despite the leadership scope, I remained deeply involved in execution and day-to-day product work.

Still hands-on!

Product Designer

October 2018 - December 2019 (1 year 3 months)

Singapore

I worked on the company's shift from B2C to B2B, helping design the first wave of products to support this transition.

I designed multiple internal and customer-facing applications and partnered closely with Product Managers and Engineers to balance user needs, technical constraints, and business priorities. The role required moving quickly while maintaining clarity and design quality across an evolving product surface.

GoBear

Product Designer

June 2016 - October 2018 (2 years 5 months)

I worked on Asia's leading finance and insurance comparison platform, focusing primarily on the Banking and Loans segment.

Reporting to the Design Director, I contributed across discovery, interaction design, and iteration. I collaborated closely with product and engineering teams to improve complex financial journeys and help users make informed decisions.

Otsaw Digital

Part-Time UI/UX Designer

July 2015 - January 2016 (7 months)

Singapore

I worked on a mobile application project alongside a small, multidisciplinary team.

My role focused on UI and interaction design, collaborating closely with engineers, writers, and other creatives throughout the process. Working with a

strong team helped me build an appreciation for cross-functional collaboration and how different roles contribute to shaping a product.

CX Infotech

UI/UX Designer

February 2014 - February 2015 (1 year 1 month)

I worked at a software house where speed mattered. The role involved producing large volumes of UI screens across multiple client projects, often under tight timelines.

A big part of the work was recreating existing designs with high fidelity. Copying designs down to the pixel taught me discipline and attention to detail, and helped me develop an eye for spacing, typography, and visual consistency.

This was an important formative role before I went on to further my studies, and it shaped how I approach craft and execution to this day.

Education

Singapore Institute of Technology

Bachelor's Degree, Communication Design · (2014 - 2016)

Temasek Polytechnic

Environment Design · (2007 - 2011)
